

## ELECTRONIC MEDICAL RECORDS

A provincial electronic medical record solution is now available to all community-based physicians on PEI. Telus Health's Collaborative Health Record (CHR) is a cloud-based solution with a full suite of tools for collaboration, patient engagement, automation and data optimization.

The province's decision to use a single EMR solution will foster improved communications with health-care teams and support integration with other health information systems.

**We believe we are on track to be the most digitally integrated health-care system in Canada.**

The Collaborative Health Record offers all the functionality you'd expect in an EMR, and more:

- Patient registration and scheduling
- Encounter templates
- Medication management
- E-Referrals
- E-Faxing
- Robust data analytics
- Virtual visits
- Patient engagement: online booking, automated appointment reminders, self-assessments and physician-to-patient secure messaging.

The EMR Solution is part of PEI's vision for one patient one record. The EMR will be integrated with other digital information systems, including:

- Client Registry
- Billing system
- Clinical documentation from the hospital-based Clinical Information System
- Laboratory
- Diagnostic Imaging
- Electronic prescribing (Prescribe IT) coming soon

Implementation, hardware and licencing fees are covered by the government for salaried physicians. (Valued at \$10,000+).
